DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. Claim 19 rejected under 35 U.S.C. 103(a) as being unpatentable over Parks (U.S. 5,355,251) in further view of Kume et al. (U.S. 6,115,098) and Shimada (U.S. 6,061,181).

Parks discloses an active matrix substrate having sets of display pixels that are diagonally adjacent to each other. Note the display pixels 52 in figure 5. The space between two diagonally adjacent display pixels includes a first edge defined by the first pixel and a second edge defined by the second pixel, with the two edges being parallel.

Parks does not disclose dielectric spacers in the gaps between the diagonally adjacent display pixels. Kume et al. discloses pillar-like spacers that are arranged at the corners of each pixel region. Kume et al. teaches that by arranging the spacers at the corners of each pixel region, the spacers do not obstruct the injection of the liquid crystal material into the cell and the injection rate does not have to be reduced. Thus, the chromatographic phenomenon is less likely to occur, thereby reducing the display

Art Unit: 2871

non-uniformity and improving the display quality. See column 14, lines 19-38. It would have been obvious to one of ordinary skill in the art at the time of invention to provide spacers in the spaces between diagonally adjacent pixel electrodes in the device of Parks in order to reduce display non-uniformity due to the chromatographic phenomenon and thereby improve the display quality.

Kume et al. does not disclose a structure projecting over the dielectric spacers that shield the spacers from incident light. Shimada discloses a liquid crystal display device with a portion projecting over the column spacers for absorbing or reflecting visible light. Note in figure 1, light-blocking portion 9 formed over gap control portion 8. Shimada teaches that the light-blocking portions prevent visible light from being scattered by the spacer thereby preventing glittering of the display and reduction in contrast. See column 7, lines 53-64. Therefore, it would have been obvious to one of ordinary skill in the art at the time of invention to provide light-blocking structures over column spacers in order to maintain contrast and thereby obtain good display quality.

2. Claims 20-22 rejected under 35 U.S.C. 103(a) as being unpatentable over Parks (U.S. 5,355,251) in further view of Kume et al. (U.S. 6,115,098), Shimada (U.S. 6,061,181) and Crawford et al. (U.S. 5,978,063).

Parks and Kume et al. do not disclose dielectric spacers comprising silicon oxide, silicon nitride, or organic polymers. Crawford et al. discloses forming spacers using negative UV curable polyimide or alternatively from a deposited dielectric such as CVD

Application/Control Number: 09/912,207

Art Unit: 2871

oxide or nitride. Crawford teaches that by forming spacers from these materials, the

spacer distribution and count can be precisely controlled with known photolithography

techniques. See column 3, lines 45-60. Therefore, it would have been obvious to one

of ordinary skill in the art at the time of invention to form dielectric spacers from silicon

oxide, silicon nitride, or negative UV curable polyimide in order to precisely control the

distribution and count of the spacers with known photolithography techniques.

Response to Arguments

Applicant's arguments with respect to claims 19-22 have been considered but are

moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to David Chung whose telephone number is (571) 272-

2288. The examiner can normally be reached on Monday-Friday from 8:30 am to 5:00

pm.
